

Mito Map + Flic Early-Access Pilot

PARTICIPATION AGREEMENT

Version 1.0 | Effective September 15, 2026 | Provided by Precision Mito, operator of Mito Map

Please read this agreement before applying. Participation is voluntary. You must agree to these terms before joining the pilot.

1. Purpose of the pilot

The Mito Map + Flic Early-Access Pilot evaluates whether a compatible physical Flic button can make it easier to record the time when a symptom or other health-related event occurs and add details later in Mito Map. This is an early-access product-usability pilot, not a clinical trial or medical study unless you are separately informed and separately consent to an approved research protocol.

2. Voluntary participation and eligibility

Participation is voluntary. Applying does not guarantee acceptance. You must be at least 18 years old or participate as the parent or legal guardian of the person whose information is recorded. You may decline to answer optional questions or stop participating at any time without losing access to generally available Mito Map features.

3. Pilot period and participant responsibilities

The planned pilot period is approximately eight weeks. If accepted, you agree to make a reasonable effort to follow compatibility, setup, safety, and troubleshooting instructions; use the pilot feature only when appropriate and lawful; keep your accounts and devices secure; verify important records; complete brief onboarding, midpoint, and final feedback; and report significant technical problems or safety concerns.

4. Hardware purchase and third-party services

You must own or obtain a compatible Flic button and any desired accessories. Precision Mito does not manufacture, sell, warrant, or provide hardware support for Flic products and receives no payment, commission, or referral fee from your purchase. Flic, mobile operating systems, Bluetooth services, and other third-party products are governed by their own terms and privacy practices. Wait for acceptance and compatibility instructions before purchasing hardware.

5. Early-access functionality and technical limitations

The pilot feature may change, be interrupted, or stop working. A press may fail, be delayed, appear more than once, or be associated with the wrong time because of Bluetooth range, permissions, connectivity, battery status, phone settings, operating-system behavior, third-party services, or software defects. Precision Mito does not promise uninterrupted availability, compatibility, accuracy, or a particular outcome. Back up or independently verify information that is important to you.

6. Information collected for the pilot

Depending on how you use the pilot, Precision Mito may collect and process: application and eligibility information; pilot event information such as timestamps, labels, symptoms, severity, notes, triggers, context, edits, and deletion status; technical and operational information; support communications and feedback; and agreement version, acceptance time, and related consent records.

Do not enter Social Security numbers, payment-card numbers, insurance identifiers, or unrelated medical records into pilot notes or feedback.

7. How pilot information may be used

You authorize Precision Mito and its authorized personnel, contractors, and service providers to access and use pilot information as reasonably needed to operate the feature, deliver and reconcile events, provide support, troubleshoot failures, protect security, evaluate usability and reliability, improve Mito Map, and administer the pilot.

You also authorize Precision Mito to create and use de-identified or aggregated information from pilot data and feedback for product improvement, analysis, validation, internal reporting, presentations, publications, partnership discussions, and commercial development. Precision Mito will not intentionally identify you in a public presentation or publication without separate permission.

8. Optional wearable or health-data connections

This agreement does not authorize a new connection to Apple Health, Health Connect, a wearable platform, an electronic health record, or another health-data source. Any optional connection that imports additional health or wearable data requires a separate, specific permission before activation.

9. Storage, security, access, and service providers

Precision Mito will use reasonable administrative, technical, and organizational safeguards appropriate to the pilot. No storage or transmission method is completely secure. Information may be handled by authorized service providers that support hosting, communications, analytics, security, and technical operations, subject to applicable agreements and law.

10. Retention, export, correction, and deletion

Pilot information may be retained while your account or the pilot is active and afterward as reasonably needed to operate and improve the service, maintain consent and security records, resolve disputes, meet legal obligations, and enforce agreements. You may request a copy of reasonably exportable pilot event data, ask to correct inaccurate information, or request deletion by emailing support@precisionmito.com.

A deletion request may not remove information that must be retained for legal, fraud-prevention, security, backup, or agreement-record purposes. Information already transformed into data that Precision Mito reasonably cannot link back to you, or already included in completed aggregate analyses, may be retained and used.

11. Withdrawal

You may withdraw from the pilot at any time by emailing support@precisionmito.com. Withdrawal ends future pilot participation after the request is processed but does not undo processing that occurred while your consent was active. Unless you also request deletion, information remains subject to the retention terms above. Withdrawing from the pilot does not automatically delete your general Mito Map account.

12. Privacy Policy and Terms of Use

The current Privacy Policy at precisionmito.com/privacy-policy.html and Terms of Use at precisionmito.com/terms-of-service.html also apply to your Mito Map account and use of the service. This agreement adds pilot-specific terms. If this agreement expressly gives pilot data a more specific protection than a general policy, the more specific pilot term controls for that pilot data to the extent of the conflict.

13. Not medical care or an emergency service

Do not rely on the button or Mito Map for emergencies, diagnosis, monitoring, or treatment. The pilot does not detect symptoms automatically, contact emergency services, alert a clinician or caregiver, or guarantee that an event was recorded. Call 911 or your local emergency number for an emergency and contact a qualified clinician for medical advice.

14. Risks and possible benefits

Risks include missed, delayed, duplicated, or inaccurate records; loss of privacy or confidentiality; frustration; device or battery problems; and decisions made from incomplete information. You may or may not find the workflow helpful. There is no guaranteed personal, medical, or financial benefit.

15. Changes to or end of the pilot

Precision Mito may change, pause, or end the pilot; remove a participant for safety, misuse, incompatibility, or operational reasons; or require acceptance of an updated agreement before continued participation. Material changes will be identified by a new version and effective date. Ending the pilot does not change provisions that by their nature continue, including data retention, de-identified use, disclaimers, and prior authorizations.

16. Questions and contact

For questions, accessibility support, withdrawal, export, correction, or deletion requests, contact support@precisionmito.com.

Participant acceptance

By checking the agreement box and submitting the pilot application, you confirm that you have read and understand this version of the agreement, have had the opportunity to ask questions, are authorized to agree for yourself or as a parent or legal guardian, and agree to all of its terms. If accepted, your participation is conditioned on this agreement remaining in effect.
